

Static Relationships to Dynamic Relation

MOMA-Plift-Object Multi-Actor Activity

understanding

Couch + chair + players playing ping pong.

→ 3D vision, DALL-E,
Image Segmentation, Pose Segmentation

Observation

Data, Compute, Neural Nets algorithms
whered in the deep Learning evolu-
tion in AI

AI's development has been and
will continue to be inspired by
brain science & human cognition

AI to see what humans don't see

③ Building AI to see what humans want to see

AI triggers Anxiety. (Labor threat.)
- Human labor is in dire shortage
US. - Missing 1 Million nurses

AI augmenting human capabilities
Medical
- we don't know how patient is doing
- we don't know care quality
- we don't know where is the small instrument.
- we don't know Pharmacy errors
→ Ambient Intelligence for health-care
Sensors - depth sensor
- illuminating dark spaces in health care.
- Hand hygiene

Recognizing very fine-grained objects
is not something humans are good at.
Example - species of birds.

Brain detectors - fine grained - car
- make/model/year

Correlation of street view + Census
2010

World through vision, lens

→ income, voting patterns,

Computers can

Stroop test:

Medical error / Not seeing engine -
- missing

→ Medical missing surgical instrument

Priming Bias not in.

↳ Hospital Acquired infections
kills three times more people
in US than car accidents, every
year.

Depth sensor → to measure hand hygiene

Patient mobility - detections & track
- movements,

Embodied AI - firefighters, doctors
Screenshot.

Branches of Screenshots

Observation

AI must seek to augment, not replace
our individual and collective human
capabilities and will?

Seeing too much - privacy.

Priv HAR - Recognizing human Actions
From privacy preserving lens

Warped signal - human not visible
but recover activity HW+SW.

Observation

AI can amplify or exacerbate many ~~do-~~
found issues (e.g. bias, privacy etc) that
plagued humanity for ages

We must commit to study,
forecast, and guide AI's impact
on the people & society, in a
multi-disciplinary approach

changing

What do we value? Human Centred AI

- H → The development of AI must be guided by a concern for its Human impact.
- A → AI should strive to Augment and enhance humans, not replace humans.
- I → AI technologies can be inspired by human Intelligence.
